Description:	
EVENT NARRATIVE: The Whitaker Peak RAWS sensor along the Interstate 5 corridor across Ventura and Los Angeles county reported northwest winds gusting to 64 mph. EPISODE NARRATIVE: Between October 20th and 24th, strong surface high pressure developed over the Great Basin and produced a strong and long-lasting Santa Ana wind event across Southern California. This particular Santa Ana wind event was the strongest and most widespread in recent memory with peak wind gusts over 100 mph reported at Laguna Peak and Whitaker Peak. The offshore winds produced very warm and dry conditions across Southern California which led to 9 different wildfires across Santa Barbara, Ventura and Los Angeles counties. Four of the wildfires exceeded 700 acres with one fire burning nearly 60,000 acres.

Description:

EPISODE NARRATIVE: The fourth, and final, storm in a series of weather disturbances since October 10 in Central California, hit the San Joaquin Valley on October 20, again bringing gusty winds to the Kern County mountains and deserts, with wind gusts of up to 67 mph measured at automated weather stations. Again, only light precipitation occurred with this storm, and mainly north of Fresno. Saturday afternoon, October 20, a dust storm occurred near Mojave and prompted highway patrol to close two heavily traveled freeways. Highway 58 was closed between exits 167 and 172 due to the severe visibility restrictions from the dust storm.

C.3. HYSPLIT Air Parcel Trajectories at Individual Monitoring Sites

24-hour NOAA HYSPLIT backward parcel trajectories ending at 22z (1500 PDT). Trajectories on October 20 show the influence of the strong cold front passing through the region. Trajectories from early in the event (October 21-25) show the strong influence of the Santa Ana winds. Trajectories later in the event (October 26 to November 8) show calmer flows, conducive to impact by local lingering smoke.
